

NovaPulse® CO2 Lasers

INTRAORAL, EXTRAORAL AND COSMETIC PROCEDURES

The NovaPulse CO2 laser provides a quick and easy-to-use method for physicians seeking to expand their practice capabilities.

It combines the advantages of laser precision with a familiar, scalpel-like feel.

The flexible fiber delivery system, utilizing patented hollow waveguide technology, allows the surgeon to effortlessly access difficult-to-reach treatment sites and cut, ablate, or vaporize tissue, as directed.

Surgeons experience quick procedure time, precise control, and an expanded array of office-based procedures, while patients experience shorter recovery time and minimal post-operative discomfort, allowing them to resume their normal activities earlier than with conventional surgery.
