

# **VersaPulse® PowerSuite™ Lasers**

HOLMIUM AND

DUAL WAVELENGTH LASERS

The family of VersaPulse PowerSuite holmium and dual wavelength surgical lasers is intended for stone fragmentation and ablation, vaporization, excision, incision, and immediate hemostasis of soft tissue through endoscopic, laparoscopic and open access.

PowerSuite provides the unique ability to transform into many tissue effects for treating BPH, stones, tumors, strictures and more.

A variety of single use and reusable fibers, accessories and delivery devices are available for treating a wide range of clinical conditions.
